Số 8, Tôn Thất Thuyết, Cầu Giấy, Hà Nội

Database name: v_store

Table name: item_sale

id int auto increment primary key,

item_code nvarchar(6),

item_name nvarchar(50),

quantity decimal,

expried_date date,

note nvarchar(60)

Question:

Build a Website using Laravel Framework with the following requirements:

- 1.1. Use migrate to create a database for Mysql.
- 1.2. Validate: item_code and item_name are required, do not contain special characters.
- 1.3. The Add New function allows adding Items to the database from the Website interface.
- 1.4. Display a list of items in the database on the Website interface.
- 1.5. The Edit function allows editing information of each item from the Website interface.

Database Note : user:root, port: 3306, Database name: v_store, Table name: item_sale.
